

Symposium Summary

Electrometallurgy 2012

Organizers: Antoine Allanore (Massachusetts Institute of Technology), Edouard Asselin (UBC), Michael Free (University of Utah), Georges Houlachi (Hydro-Quebec), Michael Moats (University of Utah), Shijie Wang (Rio Tinto Kennecott Utah Copper), and Jim Yurko (Materion)

Electrometallurgy 2012 was a great success. There were 34 presentations in four sessions, and 25 papers were included in the published proceedings. The Symposium included fundamental research, development, and/or application of innovative aqueous and molten salt electrometallurgical processing technologies for the extraction, concentration, recovery, refining, environmental treatment, and recycling of metals from ores, concentrates, process solutions, scrap or waste. The organizers thank all who participated. We look forward to the next Electrometallurgy Symposium in 2016, which will be hosted by the The Metallurgy and Materials Society of the Canadian Institute of Mining, Metallurgy, and Petroleum and co-sponsored by TMS.
