

The TMS Middle East - Mediterranean Materials Congress on Energy and Infrastructure Systems **2015**

January 11–14, 2015 • Doha, Qatar

CALL FOR PAPERS

This materials congress will focus on new materials research and development in applications of interest for Qatar and the entire Middle East and Mediterranean region. The goal of this congress is to build synergy among researchers working on different materials applications but with similar objectives of enhancing design, sustainability, and functionality of materials. The congress will also be a forum for establishing collaboration among academia, research institutions, and industry in the Middle East and Mediterranean region and the rest of the world.

Attendees are expected from government, academia, and industry representing the fields of energy, sustainability, infrastructure systems and computational analysis.

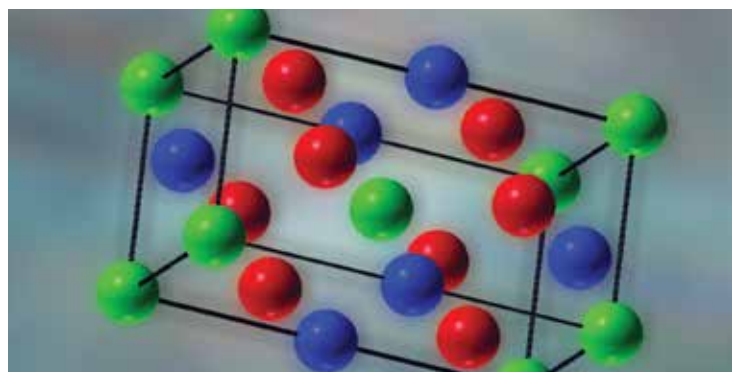

SUBMIT AN ABSTRACT

The goal of the technical program is to leverage regional interests and expertise, particularly along three tracks:

- I. **Sustainable Infrastructure Materials:** This track will encompass materials issues and solutions pertaining to critical infrastructure and will have an overarching theme of sustainability.
- II. **Materials for Energy Extraction, Conversion, and Storage:** This track will emphasize not just renewable energy resources, such as solar and wind power, but also oil and gas, which are topics of key interest to the Mideast-Mediterranean/North Africa geographic area.
- III. **Computational Materials Design:** This track will focus on computational materials design, especially as applied to energy and infrastructure systems.
