

JOM Call for papers

An official publication of The Minerals, Metals & Materials Society

Publication Date: *June 2024*

Manuscript Deadline: *December 1, 2023*

Composite Materials for Decarbonization

Decarbonization is arguably one of the most promising technologies that can address concerns related to global warming. The U.S. Department of Energy is committed to decarbonizing the nation's industrial sector through the following strategies: energy efficiency, industrial electrification, low carbon-fuels, feedstocks, and energy sources. In the quest for development of highly efficient and cost-effective materials to accelerate decarbonization goals, researchers have been exploring innovative material compositions and pioneering designs. Manuscripts on recent developments of all aspects of preparation, characterization, and decarbonization applications of advanced composite materials to accelerate decarbonization goals are invited.

Original research papers should be 3,000-9,000 words with up to 12 figures maximum; review papers should be 6,000-11,000 words with up to 20 figures maximum.

Detailed author instructions are available at:

<http://www.tms.org/AuthorTools/>

Keywords for this topic: **Characterization; Composites; Energy; Energy Conversion and Storage; Nanotechnology; Decarbonization**

Guest Editor(s): **Simona Hunyadi Murph:**
simona.murph@srnl.doe.gov

Committee Sponsor(s): **Composite Materials**

If you are interested in submitting a paper, upload your manuscript at <https://www.editorialmanager.com/jomj/>

Please note that all submissions will be subject to peer review. Submission does not guarantee acceptance.
