

**SUBMIT AN ABSTRACT BY JULY 1**

**THE WORLD COMES HERE**

**TMS2020**

**149<sup>th</sup> Annual Meeting & Exhibition**

February 23-27, 2020 • San Diego, California, USA

**Submit an abstract to:**

## **Electronic Materials**

### **Advanced Microelectronic Packaging, Emerging Interconnection Technology and Pb-free Solder**

Continuing advances in microelectronic, optoelectronic and nanoelectronic devices require new materials and technologies to meet the increasing electrical, thermal, mechanical, reliability, performance, and environmental demands placed on interconnects and packaging at all levels. This symposium will address current research in Packaging Materials and Processes, including Pb free solders, alternative interconnects, conductive adhesive, epoxy, substrates, 3D packaging, wafer level packaging, quality, reliability, and failure analysis.

Topics of interest include, but are not limited to:

- Packaging materials and Processes for next generation packages, e.g., 3D packaging, wafer level packaging, photonic packaging, Internet of Things (IoT), flexible electronics, wire bonding, automotive and power electronics
- Interconnects for packages, e.g., Pb-free solder, micro bumps, Through-silicon-vias (TSVs), direct Cu to Cu bonding, wire bonding, conductive adhesive, optoelectronic interconnects, transient liquid phase bonding, sintered nano-powder joints, and alternative interconnect materials at chip and package levels.
- Additive manufacturing and 3D printing for electronics industry
- Other packaging materials e.g., epoxy, molding compounds, epoxy flux, thermal interface material (TIM), substrate materials and process.
- Quality, Reliability, and failure analysis for next generation packages.
- Continuing challenges in implementing Pb-free solders for interconnect, plating and thermal interface material (TIM) applications
- Developments in next-generation Pb-free solders for improved reliability
- Developments in high temperature Pb-free solders and associated interconnects for automotive and power electronics
- Developments in low temperature Pb-free solder alloys and fine pitch solder joints
- Electromigration, thermomigration, stress-migration and mechanical effects
- Whisker growth in Sn, Sn-based alloys and other metallic systems
- Advanced characterization methods as applied to interconnect technology
- Fundamental materials behavior including phase transformations, computational thermodynamics, solidification, microstructure evolution, corrosion, mechanical, thermal, and electrical properties of solders and intermetallic compounds

#### **ORGANIZERS**

**Christopher Gourlay**, Imperial College London, United Kingdom

**Kazuhiro Nogita**, University of Queensland, Australia

**David Yan**, San Jose State University, USA

**Mike Wolverton**, Raytheon Company, USA

**Babak Arfaei**, Ford Motor Co., USA

**Andre Delhaise**, Celestica, Canada

**Mehran Maalekian**, Mat-tech BV, Netherlands

**Mohd Arif Salleh**, Universiti Malaysia Perlis, Malaysia

#### **SYMPOSIUM SPONSORS**

TMS Functional Materials Division

TMS Electronic Packaging and Interconnection Materials Committee

**Abstract Deadline is July 1, 2019. Submit online at**
