#### Translating Scientific Discovery into Impactful Innovation to Solve Critical Materials Challenges: A Panel Discussion

The clean energy transition calls for unprecedented demand for critical materials. These materials—like lithium for electric vehicle (EV) batteries and neodymium for magnets in offshore wind turbine generators—face supply chain vulnerabilities and are often difficult to substitute. Yet, many of the technologies used to manufacture critical materials are not necessarily viable from a safety, economic, environmental, or social standpoint in the U.S. This calls for a departure from decade-old methods to meet the needs of the clean energy transition. Innovation can lead to sustainable approaches to developing critical material supply chains. This panel will discuss how innovation in all forms—from advancing our understanding of materials at the atomic level to disruptive technologies—can be accelerated through intentional partnerships to meet the needs of the clean energy industrial base while preserving the future. The panelists will bring perspectives from industry, government, and the Critical Materials Innovation Hub (CMI), a public-private partnership led by Ames National Laboratory. This session will feature an interactive Q&A session with audience members.

#### Panelists:

**Helena Khazdozian**, Co-Chair of the Critical Materials Collaborative (CMC), Advanced Materials & Manufacturing Technologies Office, Energy Efficiency & Renewable Energy, U.S. Department of Energy

**Thomas Lograsso**, Director, Critical Materials Innovation Hub, Ames National Laboratory

**Robert Miles**, Chief Technology Officer and Co-Founder, Momentum Technologies, Inc.

**Wednesday AM | March 6, 2024  
Windermere W-2 | Hyatt**

**Session Chairs:** Barry Sadler, Net Carbon Consulting; Alan Tomsett, Rio Tinto

---

**8:30 AM Introductory Comments:** This session is designed to encourage interaction between attendees. The general topic of step changes required for carbon anodes was identified by Barry Welch in his 2023 Honorary Symposium. For each sub-topic, a panel of experienced industry representatives has been identified to present ideas and facilitate discussion.

**8:40 AM Panel Discussion:** What is the ideal carbon anode + assembly design for modern aluminium reduction cells? What is the potential to improve anode and cell performance from a bottom-up redesign of the current anode assembly (i.e., rod and anode) from the customers perspective?

Carbon anode requirements identified by smelter customers will be presented. Panel members include Pascal Lavoie (Alcoa) and Daniel Whitfield (Boyer Smelters).

**9:25 AM Panel Discussion:** Are we measuring the right things the right way in Carbon Plants? What are the development pathways for anode quality instrumentation systems? What is stopping more rapid, universal adoption of these technologies?

Panel members to present/participate in the discussion include Markus Meier from R+D Carbon and several industry expert representatives.

**10:10 AM Break**

**10:30 AM Panel Discussion:** What incremental and large step changes can be made to green, baked, and rodded anode production processes so the anodes add value to potlines? Including future decarbonisation requirements, what changes to carbon anode production technology are needed to reduce variation, improve consumption rates, reduce GHG emissions, etc?

Panel members to present/participate in the discussion include Markus Meier from R+D Carbon and several industry expert representatives.
