

**SUBMIT AN ABSTRACT BY JULY 1**

**FEBRUARY 27-MARCH 3, 2022**  
**ANAHEIM CONVENTION CENTER & ANAHEIM MARRIOTT**  
**ANAHEIM, CALIFORNIA, USA**  
**#TMSAnnualMeeting**

**SUBMIT AN ABSTRACT FOR THE FOLLOWING TMS2022 SYMPOSIUM:**

## **BIOMATERIALS**

### **BioNano Interfaces and Engineering Applications**

The symposium focuses on fundamental understanding of biological and biomimetic solid interfaces as well as their implementation into engineering applications. Interfacing biological molecules predictably with solid materials at the nanoscale is the key for hybrid materials design leading to innovative functional properties. Exploiting such properties towards developing functional materials and devices depends on a better understanding and control of the interfacial interactions at the atomic to nanoscale.

This symposium will address the synthesis, modelling and design principles of the bionano interfaces and their implementation into practical medical and technical applications such as tissue engineering, catalysis, sensors, electronics, and photonics. While the solids may include metals, ceramics, semiconductors, polymers, and their composites, the biopolymers include proteins, peptides, DNA, RNA, polysaccharides, glycans, lipids, and membranes as well as cells and viruses. A special emphasis will be given to the assembly processes at solid-liquid interfaces that lead to specific surface phenomena and designed bionano solid self-assembled structures and organizations towards functional materials, systems, and devices.

The symposium will encompass the following themes, but are not limited to:

- Fundamentals on Bionano interfaces
- Surface phenomena: Dynamic interfacial interactions
- Abiotic and biotic interfaces
- Biomolecular recognition of solids
- Supramolecular self-assembled systems
- Modelling the interactions at the bionano interfaces
- Multiscale mechanobiology and Biomechanics
- Nanoscale assembly rules and design criteria
- New trends in surface characterization, in situ and ex situ
- Machine learning and predictive modelling approaches on biodesign and bioevaluations
- Biointerfaces and applications for sensing, electronics, and photonics devices
- Protein corona effect on nanomaterials surfaces
- Modulating toxicology
- Bio-nano-material-tissue interfaces
- Implementations in regenerative and restorative medicine

#### **ORGANIZERS**

**Candan Tamerler**, University of Kansas  
**Hendrik Heinz**, University of Colorado Boulder  
**Kalpana S. Katti**, North Dakota State University  
**Terry C. Lowe**, Colorado School of Mines  
**Po-Yu Chen**, National Tsing Hua University
