

SUBMIT AN ABSTRACT BY JULY 1 FOR THE FOLLOWING TMS2023 SYMPOSIUM:

NANOSTRUCTURED MATERIALS

Functional Nanomaterials 2023

Low-dimensional (OD, 1D, 2D) materials are a broad class of materials with emergent properties originating from their reduced physical dimensions and (sub)nanoscale structures and morphologies. These low-dimensional materials offer exciting new opportunities for innovations in the technological frontiers critical for the sustainable future advancement of society, such as nano-optoelectronics, sustainable energy, high-performance sensors, and advanced environmental and healthcare technologies.

The 2023 Symposium on Functional Nanomaterials will address all aspects of low-dimensional nanomaterials, encompassing: two-dimensional (2D), nanofilms, nanosheets, and monolayers, one-dimensional (1D) nanofibers, nanotubes, and nanowires, zero-dimensional (0D) nanoparticles, and quantum dots, as well as their hierarchical assemblies, heterostructures, frameworks, and organic-inorganic hybrids. Along with sessions for conventional nanomaterials, focused sessions will be dedicated to unique design/synthesis/fabrication/manufacturing/characterization strategies, novel integration routes for emerging functionalities, and advanced device applications.

Examples of session topics include, but are not limited to:

- Nanomaterials for high-performance functional devices
- Applications, functional devices (e.g., electronics) and engineered systems derived from low-dimensional materials
- Processing/manufacturing (e.g., printing or lithography) and integration/application of low-dimensional materials and instrumentation/methods to achieve the same
- Hierarchical multi-scale structures and architectures consisting of low-dimensional materials
- Interrogation of low-dimensional materials and their fundamental properties via in situ, in operando methods towards the development of emergent functionalities
- Theoretical frameworks and computational/learning/dataintensive methods for modeling, predicting, understanding, and designing low-dimensional materials and their derivative systems

ORGANIZERS

Yong Lin Kong, University of Utah Sarah Ying Zhong, University of South Florida Mostafa Bedewy, University of Pittsburgh Woochul Lee, University of Hawaii at Manoa Changhong Cao, McGill University Kiyo Fujimoto, Idaho National Laboratory Surojit Gupta, University of North Dakota Michael Cai Wang, University of South Florida
