TMS

ANODE TECHNOLOGY for the Aluminum Industry

November 1-5, 2015 • Dubai, United Arab Emirates

Anode Technology for the Aluminum Industry 2015 will build on the success of the 2014 course, sponsored by the TMS Aluminum Committee and Light Metals Division. Hear what one 2014 attendee said about Anode Technology for the Aluminum Industry:

“I liked that this course focused on operational aspects more than theoretical. While some theory is good to get into, this course really focused on the application and methods used to form, bake, clean, and inspect anodes.”

Leading experts in the anode technology field will provide an overview of the key principles and operating practices needed for consistent production of high-quality anodes necessary for optimum potroom operations. The course is directed toward plant managers, anode area managers, process engineers, technical managers, and anode area supervisors.

Course Organizers and Instructors:

Chair: Euel Cutshall, EC Consulting
Les Edwards, Rain CII Carbon LLC
Steve Lindsay, Alcoa Inc.
Barry Sadler, Net Carbon Consulting Pty Ltd.
Robert Wombles, Koppers Industries Inc.

Registration fee: \$2,750

Registration opening soon.
