Superalloys 2021 will convene the breadth of the superalloys technology community for a virtual event to share innovations in materials processing, properties, coating technology, industrial applications, and the development of new superalloy compositions.

Participate in this carefully curated, high-quality technical program by registering today at www.tms.org/Superalloys2021.

Technical topics for Superalloys 2021 include:

- Improving superalloy manufacturability, affordability, lifecycle, and performance
- Property models and computational tools for superalloys
- Innovative characterization techniques and processing methods for superalloys
- Alloy development and superalloy coatings
- Superalloy mechanical behavior and environmental effects

See details and register at www.tms.org/Superalloys2021
