The 15th International Symposium on Superalloys (Superalloys 2024) will highlight technologies for the lifecycle improvement of superalloys. In addition to traditional focus areas of alloy development, processing, mechanical behavior, coatings, and environmental effects, Superalloys 2024 will feature papers from academia, supply chain, and product-user members of the superalloy community that highlight technologies that contribute to improving manufacturability, affordability, life prediction, and performance of superalloys.

The specific technical topics for Superalloys 2024 will include, but are not limited to:

- Improving superalloy manufacturability, affordability, lifecycle, and performance
- Property models and computational tools for superalloys
- Innovative characterization techniques and processing methods for superalloys
- Alloy development and superalloy coatings
- Superalloy mechanical behavior and environmental effects

**Keynote Speaker:**
Superalloys 2024 will feature a keynote presentation from Steve Gregson, a Senior Engineering Fellow at Rolls-Royce.
