Bauxite to Aluminum: Advances, Automation, and Alternative Processes

This topic covers all aspects of the primary aluminum production chain, including extraction and beneficiation of ores, alumina refining from bauxite and non-bauxite sources, electrode manufacturing and technologies, and aluminum electrolytic reduction. Papers invited are those that focus on advances, automation or alternative processes within the primary aluminum production chain.

Original research papers should be 3,000-6,000 words with up to 8 figures maximum; review papers should be 6,000-10,000 words with up to 15 figures maximum.

Detailed author instructions are available at: http://www.tms.org/AuthorTools/

Keywords for this topic: Aluminum; computer applications and process control; electrometallurgy; bauxite; hydrometallurgy; fundamentals

Guest Editor(s): David S. Wong and Hong Peng: david.wong@auckland.ac.nz; h.peng2@uq.edu.au

Committee Sponsor(s): Aluminum; Hydrometallurgy and Electrometallurgy

If you are interested in submitting a paper, upload your manuscript at https://www.editorialmanager.com/jomj/

Please note that all submissions will be subject to peer review. Submission does not guarantee acceptance.
