Manuscript Deadline: **May 1, 2025**

Refining Techniques to Upgrade Aluminum Scrap

To meet future requirements on both recyclability and recycled content, refining of aluminum scrap is in the spotlight for many actors in the value chain. Manufacturers of aluminum-containing products ask for insights on how much of the unwanted elements can be removed. This topic welcomes contributions on the limits and opportunities in recycling and refining, as well as research on unit operations or processes, and their environmental performance.

Original research papers should be 3,000-9,000 words with up to 12 figures maximum; review papers should be 6,000-11,000 words with up to 20 figures maximum.

Detailed author instructions are available at:

<http://www.tms.org/AuthorTools/>

Keywords for this topic: Aluminum; Environmental Issues; Recycling and Secondary Recovery

Guest Editor(s): Anne Kvithyld, Hong Peng, Amilton Botelho Junior and Jihye Kim:
