

JOM Call for papers

An official publication of The Minerals, Metals & Materials Society

Publication Date: *September 2018*

Manuscript Deadline: *April 1, 2018*

The Additive Manufacturing Committee is seeking papers on the topic of
Additive Manufacturing: Striving Toward Quality Control

While research continues on the fundamental aspects of AM, it is the ability to produce repeatable properties and microstructures that is required to incorporate AM as a primary manufacturing process. Thus, the common industrial use of AM needs to focus on methods to provide designers with guidelines for process and component utilization. By combining the aspects of process development with required properties, investigations into manufacturability and process robustness will provide guidelines for materials design.

Original research papers should be 3,000-6,000 words with up to 8 figures maximum; review papers should be 6,000-10,000 words with up to 15 figures maximum.

Detailed author instructions are available at:

<http://www.tms.org/AuthorTools/>

Guest Editor for this JOM topic is Judy Schneider:
