## Foreword

International Hydrometallurgy Symposia have been landmark conferences with worldwide participation by academic, industrial, administrative, and government personnel involved in a variety of hydrometallurgical applications: metal production, recycling, waste treatment and minimization, research and development, water and soils remediation, etc. Always well attended, these symposia have been held every 10 years since 1963 under sponsorship of the American Institute of Mining, Metallurgy and Petroleum Engineers (AIME) with the lead society alternating between The Minerals, Metals and Materials Society (TMS) and the Society of Mining, Metallurgy and Exploration (SME). Proceedings from these symposia are also well referenced and have served the hydrometallurgical community for decades. The four previous symposia and proceedings were organized and edited by M.E. Wadsworth and F.T. Davis (Dallas, TX, 1963), D.J.I. Evans and R.S. Shoemaker (Chicago, IL, 1973), K. Osseo-Asare and J.D. Miller (Atlanta, GA, 1983), and J.B. Hiskey and G.W. Warren (Salt Lake City, UT, 1993).

In order to better satisfy the hydrometallurgical community, the AIME-affiliated societies of TMS and SME approached the Metallurgical Society (MetSoc) of the Canadian Institute of Mining, Metallurgy and Petroleum (CIM) to begin cooperating at a global level by having one large symposium as opposed to several small, competing annual conferences. In this regard, the three societies decided to combine the 5<sup>th</sup> International Symposium on Hydrometallurgy with the 2003 Hydrometallurgy Meeting of MetSoc in conjunction with the 2003 CIM Conference of Metallurgists in Vancouver, British Columbia between August 24 and 27. The societies also agreed to hold future symposia every five years with organization responsibility rotating to SME in 2008, CIM in 2013, and ultimately back to TMS in 2018. Other global societies would be welcome to get involved as well and, with this in mind, the organizing committee decided to honor Professor Ian M. Ritchie for all his efforts in promoting and advancing hydrometallurgical technologies through his own research and development activities as well as with the A.J. Parker Cooperative Research Centre for Hydrometallurgy in Australia that he developed and began directing in 1992. “Hydro 2003: The Ritchie Symposium” and the ensuing proceedings represent the first effort of this unprecedented and hopefully increasing cooperation among these societies and possibly a host of other international organizations.

The organizing committee anticipated that 4 plenary and 90 invited papers would be submitted to the proceedings. These were expected to cover a variety of topics including, but not limited to, fundamentals, biotechnology, leaching, environmental applications, crystallization and precipitation, adsorption, ion exchange, solvent extraction, cyanide and alternatives for precious metal extraction and recovery, chloride and other lixiviant use in base metal extraction and recovery, process development and modeling, thermodynamic and kinetic evaluations, plant practices and innovations, scale-up, waste treatment and minimization, waste water and resource recovery, cementation and corrosion, process mineralogy and characterization, future role of hydrometallurgy, economic evaluations, and pyrometallurgical comparisons. Plenary presentations were planned for Monday morning followed by 3 concurrent sessions, each with 6 papers beginning Monday afternoon and ending Wednesday afternoon. However, the committee received over 250 abstracts and attributed this as strong support by hydrometallurgical community for the cooperation of the societies as well as for the symposium being named in honor of Professor Ian M. Ritchie. Based on this extremely favorable response, the committee decided to accept 180 abstracts and, of these, 154 papers were eventually submitted for publishing in these proceedings. This forced the committee to expand the number of concurrent sessions to five with some morning sessions having seven papers.

Most of the anticipated topics were covered and the end result was another International Hydro-metallurgy Symposium and Proceedings of high value; however, the strengths are in leaching and solution purification as well as electrometallurgy and environmental hydrometallurgy which explains why the proceedings are divided into two volumes with these specific names. Volume 1 includes Ian Ritchie's plenary "Is Extractive Metallurgy Becoming Extinct?" as well as 17 papers on precious metal leaching with cyanide and alternatives particularly thiosulfate, 32 papers on leaching applications and fundamentals using heap, chloride and autoclave techniques, and 24 papers on solvent extraction. On the other hand, Volume 2 includes the three plenary presentations by Bruce Conard on "Challenges," Doug Halbe on "Business Aspects," and Cees Buisman on "Biotechnologies" as well as 25 papers covering acid-rock drainage, arsenic, recycling and other environmental issues, 14 papers dealing with precipitation and crystallization, 9 papers on plant operations, and 18 papers about electrowinning regarding such topics as history, additives and impurities, anode and cell design, acid mist, and fundamentals. Excellent papers also cover adsorption (2), ion exchange (4), and electrochemistry (5), the latter being critical reviews for understanding leaching, precipitation, cementation, and electrowinning.

The organizing and editing committee gratefully acknowledges all the authors and presenters without whom none of this would be possible. Their patience and understanding of the review process for 154 papers was and is appreciated. Many of the authors also helped spread the word about the symposium which the hydrometallurgy community consequently received with great enthusiasm. This, of course, includes the four plenary speakers! Sincere appreciation is also extended to the various entities (universities, institutions, companies, agencies, etc.) that sponsor the research and publication efforts of the authors as well as their expenses to attend and present at the symposium. The committee is also indebted to the session chairs and co-chairs who volunteered their services and expenses to help run this event. Critical to the success of Hydro 2003 has been the support of the three societies involved and their willingness and ability to cooperate, particularly at the division level including TMS/EPD, SME/MPD and MetSoc/Hydrometallurgy Section. Specific people include TMS's Dan Steighner, Director of Member, Marketing, and Meeting Services; Michael Packard, Manager of Meeting Services; Christina Raabe, Manager, Continuing Education and Information Transfer; Marla Boots, Technical Programming Assistant; and Stephen Kendall, Book Publishing Coordinator; MetSoc's Gillian Jazzar, Administration and Meeting Planning; Ronona Saunders, Publications, Web and Marketing; Eric Brosseau, Registration and Dispatcher; and SME's Tara Davis, Publicity and Programming Manager; and Joette Cross, Meetings Manager. Finally, sincere appreciation is extended to the committee's universities and companies for the time, computer, and secretarial resources to help make the editorial changes to most of the 154 papers; this would not have happened without the marvels of e-mail, the worldwide web, and two wonderful administrative assistants who always come through in the clutch: Gail Bergman (Montana Tech) and DaNette Rule (Montana Tech/CAMP).

## Ian M. Ritchie – A Biography

Professor Ian Mackay Ritchie was born on March 18, 1936 in Tidworth, Hampshire, England the son of Lieut. Col. W.J. and Mrs L.E.P. Ritchie. In 1959 he married Ann McMahon, the girl who had nursed him when he was in hospital four years earlier. Ian and Ann have three children, Kathy, Andrew and Alec of whom they are extremely and lovingly proud.

Ian received his high school education at Watford Boys Grammar School and then went on to Cambridge University where he obtained a B.A. in Natural Sciences and an M.Eng. in Chemical Engineering. His final year project, from which he published a paper, was on solvent extraction. He also received a “blue” for playing badminton for Cambridge. Upon graduation, he accepted a position with Transitron Electronic Corporation, in Wakefield, Massachusetts, USA as a Research and Development Engineer. His research there was largely in solid state chemistry and resulted in a paper and a patent.

He left Wakefield in February 1962 to take a Ph.D. in Physical Chemistry at the University of Melbourne in Australia. This was also in solid state Chemistry, the topic being the reactions between metals and gases such as oxygen. Despite a substantial teaching load as a tutor, he was able to complete his degree in 1965 and was made a Lecturer in that year. In 1968, he was promoted to Senior Lecturer. During these years at Melbourne University, his focus was on metal oxidation reactions. For his work in this field, he was awarded the Grimwade Prize for Industrial Science from Melbourne University.

Several important changes took place in 1972. He took up a position as Associate Professor at the University of Western Australia in Perth and he started investigating the effect of oxide films on cementation reactions and other corrosion reactions. So began his interest in hydrometallurgy which has increased steadily with the years. He was awarded the Australasian Corrosion Medal in 1979 for his work in this area. In 1984, he made another move, this time as Professor of Chemistry at Murdoch University in Perth, Western Australia, where he remains today, even though he has supposedly retired. During his time there, he was named Pro Vice-Chancellor of Research for three years (1986-1988) and served as Acting Dean of the School of Mathematical and Physical Sciences for eight months (June 1991-January 1992) after which he began finalizing the plans for the A.J. Parker Cooperative Research Centre for Hydrometallurgy. In June of 1992, the Centre was formally established and Dr. Ian Ritchie was appointed as director.

For the past decade, Dr. Ritchie has dedicated his life to the Centre and it is obvious he has succeeded (as addressed later). However, the opportunity did not come by chance; it came from the previous two decades that he also dedicated to furthering hydrometallurgical technology. Since 1970, Ian authored a book, edited another, and published an additional 124 papers with 88 appearing in refereed journals and the other 36 in conference proceedings. He has also been professionally active as a referee reviewing manuscripts for 9 journals including one as a member of the Editorial Board, as a researcher in numerous hydrometallurgical areas particularly gold processing and metal cementation, and a recognized invited-lecturer presenting keynote and plenary addresses at a variety of conferences including twelve in the last six years. He has, on several occasions, given youth lectures in hydrometallurgy for schools. However, perhaps his most daunting task has not been working the ropes to keep the Parker Centre for Hydrometallurgy funded but rather to find students to conduct research and help keep it running. Consequently, Dr. Ritchie has first-hand experience regarding the difficulties associated with recruiting students into hydrometallurgy. This is one reason why he was asked to give a plenary on the status of “Extractive Metallurgy Education” for the Hydro 2003 Symposium. His interesting perspectives on the subject are included in

“Is Extractive Metallurgy Becoming Extinct?” in these proceedings. Dr. Ritchie has also received numerous accolades for his efforts including the 1997 Stokes Medal for Electrochemistry and the 1997 Applied Research (R G Becher) Medal from the Royal Australian Chemical Institute, the 1997 Western Australian Citizen of the Year (Professions), and the 2000 President’s Award from the Australasian Institute of Mining and Metallurgy. He has received a Doctor of Science from Cambridge University (1999) and an Honorary Doctorate from Murdoch University (2001). He has been elected a Fellow of the Australian Academy of Technological Sciences and Engineering (1993) and a Fellow of the Australian Academy of Science (2001). In 2003, he was awarded a Centenary Medal by the Australian Commonwealth Government.

On three occasions during his teaching career, Dr. Ritchie went on sabbatical leave. In 1970, he studied with Dr. W. Hayes at the Clarendon Laboratory, Oxford University. In 1982, he returned to Oxford to study with Dr. H.A.O. Hill in Department of Inorganic Chemistry. In 1989, his travels took him to Mintek in South Africa as a consultant and then to Department of Metallurgical Engineering at University of Utah, Salt Lake City, as a Visiting Professor. During these leaves, he would teach courses, particularly on “Electrochemistry in Hydrometallurgy.” In this course, Ian covers all aspects of electrochemistry (i.e., Evans’ diagrams, redox potential, mixed potential, corrosion, metal dissolution, metal recovery, cementation, surface control, etc.) and includes laboratory exercises (i.e., cyclic voltammetry, intermittent galvanostatic polarization, ring-disk studies, reversibility, etc.) as well as the use of free energy for thermodynamically modeling hydrometallurgical processes. Students have proclaimed that the course rates among the highest they have ever taken and additionally point out that his lectures were eloquently delivered, well organized, and showed concern for the students and their understanding due to his one-on-one approach with them. He truly takes a genuine interest in the student and their success. This insures that science is not only learned but learned to be applied. Due to his research and educational activities, particularly in electrochemistry, oxidation and kinetics, hydrometallurgy and associated technologies have been tremendously advanced via their applications and their understanding. The hydrometallurgical community has him and the one of the world’s leading research organizations, the AJ Parker Co-operative Research Centre for Hydrometallurgy, to thank.

## A.J. Parker CRC for Hydrometallurgy – At a Glance

In 1992, Dr. Ritchie finished developing and began directing the A.J. Parker Research Centre for Hydrometallurgy via an Australian Government grant for approximately A\$10.5 million (Australian). Since then, he has been responsible for its growth and, in the 5<sup>th</sup> Year Review of the Parker Centre carried out at the end of 1997, the Review Panel said of the Centre’s research:

“The A.J. Parker CRC has achieved a high level of research excellence and has established itself as a world leader in the field of hydrometallurgy and is producing excellent results.”

“It is the firm opinion of the Panel that each program area has produced at least one hallmark outcome that makes a significant contribution to the field of hydrometallurgy. To have credit for just one alone would be a tremendous accomplishment.”

“The qualities and capabilities displayed by the Director and other members of research management are truly exemplary. The Director devotes 100% of his time to CRC activities. He is clearly the guiding force behind the success of this Centre. He demands a high measure of excellence from himself and has left this imprint on others. The esteem in which he is held is reflected by the prestigious awards that he has recently received.”

Currently, the Parker Centre, as it is more commonly referred, is in its second 7-year funding

cycle via an A\$18.5 million Commonwealth Grant, has over 85 full time staff and research scientists, and employs about 45 students, mainly doctoral candidates. The staff, scientists and students are from five joint venture research partners comprised of universities (Curtin, Murdoch and Queensland) and government research agencies (CSIRO Minerals and WA Dept of Industry and Resources). With an annual research budget near A\$17 million, the Centre is now the largest hydrometallurgical research organization in the world with 12 industrial partners representing most of the leading mining companies in the world. Under Ian's leadership, the Centre has been recognized with three awards: the 1996 Western Australian Industry and Export Award for Research, a 1999 Inaugural Award for Technology Transfer from the Cooperative Research Centres' Association, and the 1999 Business and Higher Education Round Table Awards for Outstanding Achievement in Collaborative Research and Development involving a Cooperative Research Centre.

The Parker Centre has become a focus of world-class efforts to provide technical solutions to the minerals industry. Hydrometallurgy activities encompass both fundamental and applied research in alumina, gold, and base-metal sectors. The Centre is now growing its client base into overseas markets, particularly North America, South Africa and Europe. Quality, strategic R&D by the Centre is seen by the industry as an attractive investment. A recent survey of the industry revealed an estimated ten-fold return based on direct costs of research to the client. In addition, the Centre has a strong commitment to education of postgraduate students wishing to enter the mining industry as well as providing specialist courses for those technical professionals already employed in the industry. The wide range of employment opportunities in the mining industry is reflected in the diversity of the disciplines amongst the Centre's research team: extractive metallurgy, chemistry, biotechnology, physics, engineering, molecular modeling, microscopy, geology and computational fluid dynamics.

Typical examples of Parker Centre research activities include using (1) atomic force microscopy and molecular modeling to control gypsum scaling and improve the understanding of alumina crystallization in a Bayer plant, (2) biology to hasten the leaching kinetics of copper from chalcopyrite, improve the degradation of thiocyanate and cyanide in gold process waters, and modify the (3) computational fluid dynamics and lasers to make thickeners work more efficiently, (4) strain gages and metallography to determine the electrowinning conditions to minimize stressing in cobalt and nickel production, (5) solvent extraction to remove manganese from cobalt/nickel process solutions, separate rare-earth metals such as neodymium from one another, and examine phase separation and organic degradation as well as cross-contamination of solvent extractants, (6) synergists to improve selectivity of given solvent extractants as alternatives to the expensive option of developing new extractants, (7) modern gravity recovery techniques to pre-concentrate gold prior to hydrometallurgical processing, (8) geotechnical parameters to understand and model heap leaching kinetics, predict the leaching behavior of preg-robbing ores as well as the effect of minerals on thiosulfate leaching of gold, and oxidize sulfide minerals to thiosulfate for gold dissolution, (9) traditional research methods to minimize copper-catalyzed oxidation of thiosulfate and to improve upon ferric ion precipitation from nickel-laterite leach solutions as well as the leaching kinetics of base metals by chloride and of gold by ammonium thiosulfate both with and without copper, (10) autoclaves to determine the effect of chloride on pyrite oxidation, and (11) sulfur dioxide to produce ferrous cation which reductively dissolves manganese dioxide. In fact, contributions from these activities to Hydro 2003 Symposium and Proceedings are major and greatly contribute to its success. These contributions come from multi-disciplinary teams which help keep the hydrometallurgical community on top of cutting-edge technology.

Alternative Copper(II) Catalysts for Gold Leaching: Use of Multidentate Ligands to Control Thiosulfate Oxidation .....	213
<i>T. Brown, A. Fischmann, L. Spiccia and D.C. McPhail</i>	
A Novel Thiosulfate System for Leaching Gold Without the Use of Copper and Ammonia.....	227
<i>J. Ji, C. Fleming, P.G. West-Sells and R.P. Hackl</i>	
A Process for Counteracting the Detrimental Effect of Tetrathionate on Resin Gold Adsorption from Thiosulfate Leachates .....	245
<i>P.G. West-Sells, J. Ji and R.P. Hackl</i>	
<b><u>Heap Leaching</u></b>	
Ammonium Thiosulfate Heap Leaching.....	259
<i>P. Bhakta</i>	
Measurement and Application of Biooxidation Kinetics for Heaps .....	269
<i>P. Bhakta</i>	
Mathematical Modeling of Pyritic Refractory Gold Ore Heap Biooxidation: Model Development and Isothermal Column Simulations.....	275
<i>S.C. Bouffard and D.G. Dixon</i>	

Heap Leach Modeling – The Current State of the Art .....	289
<i>D.G. Dixon</i>	
A Comprehensive Copper Stockpile Leach Model:	
Background and Model Formulation .....	315
<i>C.R. Bennett, M. Cross, T.N. Croft, J.L. Uhrie, C.R. Green and J.E. Gebhardt</i>	
Ore Geotechnical Effects on Copper Heap Leach Kinetics .....	329
<i>G. Miller</i>	
Process Improvements at Mantoverde Heappleach-SX-EW Plant .....	343
<i>L. Trincado, U. Troncoso, C. Vargas, C. Bunger, and G. Zárate</i>	
The Dynamics of Chalcocite Heap Bioleaching .....	351
<i>J. Petersen and D.G. Dixon</i>	
The Life Cycle of of Chalcocite Heap Bioleach System .....	365
<i>D. Readett, L. Sylwestrzak, P.D. Franzmann, J.J. Plumb, W.R. Robertson, J.A.E. Gibson and H. Watling</i>	
<b>Fundamentals</b>	
Selective Bacterial Leaching of Cobalt and Nickel from Chalcopyrite Concentrate.....	377
<i>R.P. Hackl and R.J. Vos</i>	
Single Step Separation and Recovery of Palladium Using Nitrogen Species	
Catalyzed Pressure Leaching and Silica Polyamine Composites .....	393
<i>C. Anderson, E. Rosenberg, Y. Cao, L. Ratz and C. Hart</i>	
The Mechanism of the Dissolution and Passivation of Chalcopyrite:	
An Electrochemical Study .....	405
<i>I. Lázaro and M.J. Nicol</i>	
The Sonochemical Leaching of Chalcopyrite.....	419
<i>N. Abed and D. Dreisinger</i>	
Leaching Chalcopyrite in Ammoniacal Solutions Sparged with a SO <sub>2</sub> /O <sub>2</sub> Gas	
Mixture.....	431
<i>M.M. Bertini and P.F. Duby</i>	
Raman Investigation of Sulfide Leaching .....	447
<i>G. Parker, R. Woods and G. Hope</i>	
Fluosilic Acid Leaching of Galena .....	461
<i>P.R. Taylor, Y. Choi and E.E. Vidal</i>	

Use of Alternating Current for Leaching of Intermediate Products from Copper and Nickel Production .....	475
<i>A.V. Tarasov, V.M. Paretsky and V.A. Bryukvin</i>	
The Reductive Leaching of Magnanese Dioxide: Reaction Kinetic Models and Mechanisms.....	485
<i>G. Senanayake</i>	
<b><u>Chloride</u></b>	
Atmospheric Chloride Leaching: The Way Forward for Nickel Laterites .....	501
<i>B. Harris and J. Magee</i>	
Chloride Processing of Metal Sulphides: Review of Fundamentals and Applications.....	517
<i>G. Senanayake and D.M. Muir</i>	
Minimizing Fuel Costs During Thermal Regeneration of the Hydrochloric Acid Lixiviant.....	533
<i>K. Adham and C. Lee</i>	
Solution Purification in the Outokumpu Hydrocopper <sup>TM</sup> Process .....	545
<i>M. Hämäläinen, O. Hyvärinen and M. Jyrälä</i>	
Direct Hydrochloric Acid Leaching of an Egyptian Ilmenite Ore for Production of Synthetic Rutile.....	555
<i>I.A. Ibrahim, M.H.H. Mahmoud, A.A.I. Afifi, and B.A. El-Sayed</i>	
New Developments in the Altair Hydrochloride TiO <sub>2</sub> Pigment Process.....	565
<i>D. Verhulst, B. Sabacky, T. Spitler and J. Prochazka</i>	
Electrochemical Mechanism Study of Manganese Dioxide Dissolution in Acidic Chloride Solution in Presence of Ferrous/Ferric Ions.....	577
<i>G. Xueyi, H. Kai, L. Qihou, Z. Duomo and Q. Dingfan</i>	
<b><u>Pressure &amp; Autoclave</u></b>	
The Effect of Chloride Ions on the Oxidation of Pyrite Under Pressure Oxidation Conditions .....	591
<i>M.J. Nicol and J.Q. Liu</i>	
The Use of Ortho-Phenylene-Diamine (OPD) as a Surfactant in the Pressure Oxidation of Pyritic Gold Ores and Concentrates .....	603
<i>D. Dreisinger, Z. Zheng and N.J. Hannigan</i>	

Use of Hydrometallurgy in Direct Processing of Base Metal/PGM Concentrates .....	617
<i>J.Milbourne, M. Tomlinson and L. Gormely</i>	
Development and Implementation of a Novel Pressure Leach Process for the Recovery of Cobalt and Copper at Chambishi, Zambia .....	631
<i>E. Munnik, H. Singh, T. Uys, M. Bellino, B. Harris, K. Fraser and J. du Plessis</i>	
PH Measurement in High-Temperature Hydrometallurgical Systems .....	645
<i>V.G. Papangelakis, D.S. Seneviratne, Z. Jankovic, X.Y. Zhou and S.N. Lvov</i>	

Design of Horizontal Autoclaves – A Pilot Plant Evaluation of Solids Suspension, Blending and Residence Time Distribution .....	657
<i>P. Forschner, D. Houlton, R. Klepper and V. Kassera</i>	
CFD in Autoclave Circuit Design .....	671
<i>L. Oshinowo, L. Gunnewiek and K. Fraser</i>	
Autoclave Technology and New Reagents for Integrated Treatment of Russian Polymetallic Concentrates .....	687
<i>A.V. Tarasov and E.M. Timoshenko</i>	

## Solution Purification

### Adsorption & Ion Exchange

The Effect of Pore Size Distribution on Gold Adsorption by Magnetic Activated Carbons .....	701
<i>G.A. Munoz, S. Duyvesteyn and J.D. Miller</i>	
Potential of Magnetic Adsorption/Filtration for Hydrometallurgical Wastewater Treatment .....	711
<i>J.D. Navratil</i>	
Application of Ion Exchange Polymers in Copper Cyanide and Acid Mine Drainage .....	717
<i>W.H. Jay</i>	
Commercial Separations in the Copper Industry Using Molecular Recognition Technology (MRT).....	729
<i>R.L. Bruening, J.B. Dale, N.E. Izatt and S.R. Izatt</i>	
Dynamic Modeling for Design of Ion Exchange Systems.....	741
<i>K. Nikkhah</i>	
The Effect of Plating Additives on the Recovery of Copper from Dilute Aqueous Solutions Using the Chelating Resin Dowex M4195 .....	753
<i>W. Ewing, J.W. Evans and F.M. Doyle</i>	

## Solvent Extraction

Solvent Extraction of Halides from Metallurgical Solutions.....	765
<i>C.R.S. Mason, B. Grinbaum, J.R. Harlamovs     and D.B. Dreisinger</i>	
Piloting of the Halogen™ Process with Mixer-Settlers and Bateman Pulsed Columns .....	777
<i>J.M. Kuhn, C.R.S. Mason, J.R. Harlamovs,     M.W. Bell and E.M. Buchalter</i>	
Synergistic Solvent Extraction and Its Potential Application to Nickel and Cobalt Recovery .....	787
<i>C.Y. Cheng, M. Urbani and M. Houchin</i>	
Flexibility Trends in Copper Solvent Extraction .....	801
<i>H. Hein</i>	
Heat Balances in Copper SX/EW Operations.....	821
<i>D.J. Burkhardt</i>	
Extraction of Nickel and Calcium from Hypersaline Solutions Using Versatic 10 .....	829
<i>D. Helm, E. Paatero and D. Ibana</i>	
Application of Solvent Extraction for the Separation of Molybdenum from Nano- Crystalline Cobalt Electrodisposition Effluents.....	843
<i>M. Oliazadeh, R.T. Wu, J.W. Huang and     A.M. Alfantazi</i>	
Recovery of Phosphoric Acid in Waste Acid Mixtures Discharged from the Liquid Crystal Industry by Solvent Extraction.....	853
<i>J. Shibata, M. Morikawa, N. Yoshikawa,     N. Murayama and H. Yamamoto</i>	
Phosphoric Acid Extraction from an Uranium-Phosphorous Liquor.....	861
<i>J.S. Benedetto and C.A. Morais</i>	
Indium Recovery from Sulfuric Solutions: A Comparative Study Involving Acidic Organophosphorus Extractants.....	869
<i>P.M. Rosário, P.J. Martins and A.P. Paiva</i>	
Gold Solvent Extraction from Alkaline Cyanide Solutions, Using LIX 79 Extractant.....	881
<i>J.L. Valenzuela, S. Aguayo, J.R. Parga     and R.G. Lewis</i>	
Preparation of Ultrafine Silver Particles by Solvent Extraction Techniques .....	891
<i>M.G. Sánchez-Loredo, M.M. González-Chávez     and J. López-Martinéz</i>	

Equilibrium Modifiers in Copper Solvent Extraction Reagents – Friend or Foe?.....	905
<i>G. Kordosky and M. Virlig</i>	
Third Phase Formation in TBP Solvent Extraction Systems as a Result of Interaction Between Reverse Micelles.....	917
<i>R. Chiarizia, P. Thiagarajan, M.P. Jensen, M. Borkowski and K.C. Littrell</i>	
Room-Temperature Ionic Liquids as Diluents for the Liquid-Liquid Extraction of Metal Ions: Promise and Limitations .....	929
<i>M.L. Dietz, M.P. Jensen, J.V. Beitz and J.A. Dzielawa</i>	
Development of Extractants to Transport Metal Salts in Base Metal Recovery Processes .....	941
<i>S.G. Galbraith, D.K. Henderson, H.A. Miller, P.G. Plieger, P.A. Tasker, K.J. Smith and L.C. West</i>	
Application of Competitive Complexation/Solvation Theory in Metals Solvent Extraction: New Opportunities in Process Development.....	955
<i>V. Kislik</i>	
Solvent Extraction System Modeling Using the Program SXFIT .....	969
<i>L.H. Delmau, C.F. Baes, D.A. Bostick, T.J. Haverlock and B.A. Moyer</i>	
Mass Transfer Rates for Up-Pumping Impeller Systems.....	983
<i>D. Adams, M. Preston, M. Giralico and B. Gigas</i>	
On-Line Analysis in Nickel and Copper Solvent Extraction .....	989
<i>D. Hughes, M. Kongas and E. Rauma</i>	
Biological Degredation of Solvent Extraction Circuit Plant Organic .....	1003
<i>N. Callao I., G.E. Jenneman, K. Sublette, M.D. Bishop, S.K. Young and A.G. Morrison</i>	
FRP as a Material of Construction for Solvent Extraction Equipment.....	1023
<i>D. Goodman, R. Aaslepp and R. Moubarac</i>	
Scale-Up of Pumpers & Mixers for Solvent Extraction .....	1037
<i>T.A. Post</i>	
Advanced Mixer Settler Designs that Will Optimize Tomorrow's Large Flow Production Requirements.....	1053
<i>M. Giralico, B. Gigas and M. Preston</i>	
Author Index .....	1067

# TABLE OF CONTENTS

## VOLUME 2: ELECTROMETALLURGY AND ENVIRONMENTAL HYDROMETALLURGY

Foreword .....	v
Ian M. Ritchie – A Biography .....	vii
Session Chairs and Co-Chairs.....	xi

### Plenaries

Challenges for Hydrometallurgy in Environmental and Health Stewardship.....	1075
<i>B.R. Conrad</i>	

Business Aspects and Future Technical Outlook for Hydrometallurgy .....	1091
<i>D. Halbe</i>	

Biotechnology for Sustainable Hydrometallurgy .....	1105
<i>J. Boonstra and C.J.N. Buisman</i>	

### Electrometallurgy

#### Electrochemistry & Cementation

Electrochemistry: The Key to Understanding Hydrometallurgical Reactions.....	1125
<i>M. Jeffrey, S. Robertson, H. Zhang and E. Ho</i>	

Limitations for the Use of Evans' Diagrams to Describe Hydrometallurgical Redox Phenomena .....	1141
<i>R.M. Luna-Sánchez, I. González and G.T. Lapidus</i>	

Hydrogen Reduction of Metal Ions: An Electrochemical Model .....	1151
<i>K. Osseo-Asare</i>	

Alloy Formation During the Cementation of Gold on Copper from Ammoniacal Thiosulfate Solutions .....	1167
<i>J. Lee and J.B. Hiskey</i>	

Some Aspects of Cementation Reactions .....	1179
<i>I.M. Ritchie</i>	

## Electrowinning

Effect of Impurity Presence in Zinc Chloride Electrowinning .....	1195
<i>C. Lupi, D. Pilone, E. Beltowska-Lehman</i>	
The Effects of Solution Impurities on the Properties of Nickel Cathodes.....	1205
<i>D. Kittelty and M.J. Nicol</i>	
Effects of Some Polyols and Organic Acids on the Current Efficiency and the Cell Voltage During Zinc Electrowinning .....	1219
<i>S. Jin, E. Ghali, G. St-Amant and G. Houlachi</i>	
Determination of Crystallite Size and Surface Roughness of Copper Deposits for Electrowinning in the Presence of an Organic Additive .....	1233
<i>C. Fabian, M. Ridd, S. Ness, T. Lancaster and G. Griffin</i>	
Electrocrystallization of Nickel: Effect of Certain Metal Ions.....	1247
<i>B.C. Tripathy, U.S. Mohanty, T. Subbaiah, S.C. Das and V.N. Misra</i>	
The Effect of Dissolved Manganese on Anode Activity in Electrowinning .....	1255
<i>L. Pajunen, J. Aromaa and O. Forsén</i>	
Study of Anodic Slime from Chilean Copper Electrowinning Plants.....	1267
<i>J. Ipinza, J.P. Ibáñez, F. Vergara and A. Pagliero</i>	
Zinc Electrowinning Using Novel Rolled Pb-Ag-Ca Anodes.....	1279
<i>A. Siegmund and D. Prengaman</i>	
Electrodeposition of Nickel-Cobalt Alloys from Sulfate Acid Baths .....	1289
<i>C. Lupi and D. Pilone</i>	
Extraction of Copper at Elevated Feed Concentrations .....	1299
<i>R.E. Molnar and N. Verbaan</i>	
Investigations of Spouted Bed Electrowinning for the Zinc Industry.....	1313
<i>O.M.G. Newman, P.A. Adcock, M.J. Meere, P. Freeman, J.W. Evans and S. Siu</i>	
Successful Industrial Use of Quillaja Saponins ( <i>Quillaja saponaria</i> Molina) for Acid Mist Suppression in Copper Electrowinning Process .....	1331
<i>A.F. Otero, R.M. San Martin and A. Cruz</i>	
Hydrogen Inhibitor Applications in Fuel Cells and Base Metal Electrowinning .....	1341
<i>B.W. Downing, E. Gyenge, J. Lu, D.B. Dreisinger and J. Jung</i>	

Direct Electrowinning of Silver from Dilute Leach Liquors .....	1355
<i>S. Jayasekera</i>	
High Current Density EMEW® Copper Electrowinning .....	1369
<i>V. Escobar, T. Treasure and R.E. Dixon</i>	
Performance of Intercell Bars for Electrolytic Applications: A Critical Evaluation .....	1381
<i>G.A. Vidal, E.P. Wiechmann and A.J. Pagliero</i>	
Commercial Development of a Descending Packed Bed Electrowinning Cell, Part 2: Cell Operation .....	1395
<i>D. Robinson, S. MacDonald and F. Todaro</i>	

## Operations

Feasibility Studies: Just How Good Are They? .....	1407
<i>M.F. Vancas</i>	
Innovation: The Way Forward for Hydrometallurgical Processing .....	1415
<i>V.I. Lakshmanan, R. Sridhar, G.B. Harris and R. Ramachandran</i>	
Copper Concentrate Leaching Developments by Phelps Dodge Corporation .....	1429
<i>J.O. Marsden, R.E. Brewer and N. Hazen</i>	
Hydrometallurgical Applications of Rheology Testing .....	1447
<i>A. Mezei</i>	
The Development and Implementation of Industrial Hydrometallurgical Gallium and Germanium Recovery .....	1461
<i>T.S. Fayram and C.G. Anderson</i>	
The Sepon Copper Project: Development of a Flowsheet .....	1487
<i>K. Baxter, D. Dreisinger and G. Pratt</i>	
The Teck Cominco HydroZinc™ Process .....	1503
<i>H.M. Lizama, J.R. Harlamovs, S. Bélanger and S.H. Brienne</i>	
Removal of Phosphorous from Lisakovskiy Iron Ore by a Roast-Leach Process .....	1517
<i>H.R. Kokal, M.P. Singh and V.A. Naydyonov</i>	
On-Line Analyzers in Hydrometallurgical Applications .....	1531
<i>R. Krentz</i>	

# **Environmental Hydrometallurgy**

## **Recycling**

Recycling Non-Ferrous Metals from U.S. Industrial Waste .....	1543
<i>P.B. Queneau</i>	
Copper Recovery from Waste Printed Circuit Board.....	1555
<i>K. Koyama, M. Tanaka and J.-C. Lee</i>	
Metal Recovery from Electronic Scrap by Leaching and Electrowinning IV .....	1565
<i>D. Pilone and G.H. Kelsall</i>	
Recovery of Zinc(II) from Spent Hydrochloric Acid Solutions from Zinc Hot-Dip Galvanizing Plants .....	1577
<i>M. Regel-Rosocka, I. Miesiac, R. Cierpiszewski, I. Mishonov, K. Alejski, A.M. Sastre and J. Szymanowski</i>	
Recycling of ZnO Flue Dust to Produce Zinc by Hydrometallurgical Routes .....	1593
<i>J. Jandová, P. Dvořák, V. Jiřičný and R. Mráz</i>	
Recovery of Cobalt and Tungsten from Scrap Carbide Pieces Through a Hydrometallurgic Route.....	1605
<i>S.N. Ashrafizadeh, M.S. Bafghi, R. Shahbazi and M.R. Hossein</i>	
Selective Leaching of Platinum and Palladium by Chloride Solution.....	1617
<i>K. Liu, W.T. Yen, A. Shibayama and T. Fujita</i>	
Recovery of Chromium(VI) from Electroplating Rinse Water: The Development of a Hollow Fibre Solvent Extraction Process .....	1629
<i>P.J. Harrington and G.W. Stevens</i>	

## **Precipitation**

Neutralisation and Precipitation of Iron(III) Oxides at Ambient Temperatures Using Caustic, Lime or Magnesia.....	1643
<i>E. Jamieson, J. Farrow and D. Muir</i>	
The Precipitation Chemistry and Performance of the Akita Hematite Process – An Integrated Laboratory and Industrial Scale Study.....	1657
<i>T.C. Cheng, G.P. Demopoulos, Y. Shibachi and H. Masuda</i>	
Recent Developments in Iron Removal and Control at the Zinc Corporation of South Africa .....	1675
<i>J.O. Claasen, J. Rennie, W.H. van Niekerk, E.H.O. Meyer and R.F. Sandenbergh</i>	

Iron(II) Oxidation by $\text{SO}_2/\text{O}_2$ in Uranium Leach Solutions .....	1691
<i>E.M. Ho and C.H. Quan</i>	
Reactions of Carbon Dioxide with Tri-Calcium Aluminate .....	1705
<i>P.G. Smith, R.M. Pennifold, M.G. Davies and E.J. Jamieson</i>	
Removal of Thallium from Wastewater .....	1717
<i>C. Williams-Beam and L.G. Twidwell</i>	
Adaptation of Dilute Mold Lime Dual Alkali Scrubbing at Stillwater Mining Company's PGM Smelter .....	1729
<i>R.R. Lunt, D.K. Modrow and G.K. Roset</i>	
Gypsum Fouling in Neutralization Reactors and Aqueous Streams .....	1741
<i>J.F. Adams and V.G. Papangelakis</i>	
The Behaviour of the Lanthanide Elements During Jarosite Precipitation.....	1755
<i>J.E. Dutrizac</i>	
Recovery of Cerium by Oxidation/Hydrolysis with $\text{KMnO}_4\text{-Na}_2\text{CO}_3$ .....	1773
<i>C.A. Morais, J.S. Benedetto and V.S.T. Ciminelli</i>	
Compartmental Modelling of an Aggregating Batch Gibbsite Precipitator.....	1783
<i>T. Li, D. Ilievski and I. Livk</i>	
Gibbsite Crystal Growth in Caustic Aluminate Solutions Under Different Flow Regimes.....	1793
<i>T. Li, D. Bedelle, I. Livk and D. Ilievski</i>	
Selective Precipitation of Cobalt from Ammonia Leach Solutions: Recent Experience at the Corefco Refinery in Fort Saskatchewan .....	1803
<i>G.K.W. Freeman</i>	
Selective Precipitation for Cobalt and Molybdenum Recovery from a Synthetic Industrial Waste Effluent.....	1809
<i>J.H. Huang, M. Oliazadeh, C. Kargl-Simard and A.M. Alfantazi</i>	
<b><u>Acid Rock Drainage</u></b>	
Remediation of Acid Mine Drainage at the Friendship Hill National Historic Site with a Pulsed Limestone Bed Process .....	1823
<i>P.L. Sibrell, B. Watten and T. Boone</i>	
Development of SRB Treatment Systems for Acid Mine Drainage .....	1837
<i>S. Nordwick, M. Zaluski, D. Bless and J. Trudnowski</i>	

High Rate Biotechnology to Produce Low Cost Sulfide for the Selective Recovery of Metals from Acid Wastewater – Commercial Case Studies.....	1847
<i>R.W. Lawrence, D. Kratochvil, M. Bratty and P.B. Marchant</i>	
Prevention of Acid Mine Drainage from Open Pit Highwalls .....	1861
<i>R. Wilmoth, A.L. McCloskey and D.M. Jordan</i>	
Application of Lignosulfonates in Treatment of Acid Rock Drainage .....	1873
<i>J.M. Zhuang and T. Walsh</i>	
<b><u>Arsenic</u></b>	
The Removal of Arsenic from Process Solutions:	
Theory and Industrial Practice .....	1889
<i>B. Harris</i>	
Biological Water Treatment for Dissolved Metals and Other Inorganics .....	1903
<i>B. Wahlquist, T. Pickett, J. Adams and T. Maniatis</i>	
Sorption of Arsenate from Aqueous Solution with Manganic Ferric Oxyhydroxide .....	1913
<i>G.R. Chaudhury, P. Chattopadhyay, R.P. Das, D.M. Muir and P. Singh</i>	
Preparation, Characterization and Solubilities of Adsorbed and Co-Precipitated Iron (III)-Arsenate Solids.....	1923
<i>Y.F. Jia, G.P. Demopoulos, N. Chen, J.N. Cutler, and D.-T. Jiang</i>	
Adsorptive Removal of Arsenic and Fluoride by Using Orange Juice Residue .....	1937
<i>K.N. Ghimire, K. Inoue, K. Makino and R.P. Dhakal</i>	
Removal of Arsenic by Red Mud from Contaminated Waste Water.....	1951
<i>L.C. White, E. Paling, P. Singh and W. Zhang</i>	
<b><u>General</u></b>	
Biosorption of Heavy Metal Ions from Wastewater by <i>Streptomyces Viridosporus</i> .....	1961
<i>R.K. Amankwah and W.T. Yen</i>	
Metal Waste Prevention by SLM .....	1971
<i>I. Van de Voorde, J. Vander Linden, S. Vanderkerken, H. Dhanens and R.F. De Ketelaere</i>	
The SO <sub>2</sub> /O <sub>2</sub> System as a Novel Technology for the Remediation of Contaminated Sediments .....	1983
<i>M.M. Bertini and P.F. Duby</i>	

Separation of Copper, Nickel and Cobalt in Sulphate and Chloride Solutions by Solvent Extraction.....	1993
<i>Y. Jiaoyong, L. Junping and Z. Yonggong</i>	
Reclamation of Cobalt and Copper from Copper Converter Slags.....	1999
<i>T. Deng and Y. Ling</i>	
The Use of Pb Isotopes, Total Metals Analysis and Total Metals Ratio to Characterize Pb Transport and Fate in an Interrupted Stream, Aravaipa Creek, SE Arizona .....	2013
<i>O. Morfin, M.H. Conklin, T.L. Corey, J.B. Hiskey and J. Ruiz</i>	
Author Index .....	2027
