TABLE OF CONTENTS
Carbon Dioxide Reduction Metallurgy

Preface ................................................................................................................ ix
Editors............................................................................................................... xiii

Carbon Dioxide Reduction Metallurgy

Mechanisms

From the Manhattan Project to Global Warming: The Science and Technology of CO2 Mitigation.................................................................3
  Meyer Steinberg

Chemical Utilization of Sequestered Carbon Dioxide as a Booster of Hydrogen Economy .................................................................19
  Michael Moats, Jan Miller, and Wlodzimierz Zmierczak

Novel, Synergistic Oxygen Supply Technology for Metals Processing .................................................................25
  Phillip Armstrong, John Gordon, and Charles Lewinsohn

CO2 Reduction by Dry Methane Reforming over Hexaluminates: A Promising Technology for Decreasing Global Warming in a Cost Effective Manner ...................................................29
  Maria Salazar-Villalpando, and Todd H. Gardner

A Proposal for a Reduction Method of Global Atmospheric CO2: Isolation of Surplus CO2 from the Biosphere and Fix it to Form an Insoluble Mineral onto a Sea Bottom .........................................35
  Katsuyoshi Tatenuma

CO2 Capture and Sequestration – Implications for the Metals Industry ....................................................................45
  Mark Berkley, Jason Berzansky, David Clarry, and Jim Sarvinis
Ferrous Industry

UCLOS: The European Steel Industry's Effort to Find
Breakthrough Technologies to Cut Its CO2 Emissions
Significantly

Jean-Pierre Birat, and J. Borlée

Recent Developments in Technology Management for
Reduction of CO2 Emissions in Metal Industry in India

Malti Goel

Impact on Greenhouse Gas Emissions of a Switch from
Carbon to Hydrogen as the Principal Reducing Agent in
Producing Metals

James Evans, and Brian R. Wildey

Sequestration of Carbon Dioxide by Steelmaking Slag:
Process Phenomena and Reactor Study

Von Richards, Charles Rawlins, Simon N. Lekakh,
and Kent D. Peaslee

Canadian Green Steel: Adopting Best Practices

Jon Feldman, Edmund Smith, Steve Gale, and David Clarry

Reduction of Ti-V-Magnetite with Microwave

Chenguang Bai, Liangying Wen, and Feng Xia

Electrolytic Methods

Electrochemical Reduction of Carbon Dioxide

Melvin Miles

Soda Fuel Cycle Metallurgy - Choices For CO2 Reduction

Neale Neelameggham

Electrocatalytic Reduction of CO2 to C2H4 at a
Gas/Solution/Metal Interface

Kotaro Ogura

CO2 Free Electrochemical Process for Production of Light
Metals Using Ionic Liquids as Electrolytes

Mingming Zhang, and Ramana Reddy
Carbon Dioxide Recycling by High Temperature Co-Electrolysis and Hydrocarbon Synthesis ..........................................................171
Joseph Hartvigsen, S. Elangovan, Lyman Frost, Anthony Nickens, Carl Stoots, James O’Brien, and J. Stephen Herring

CO2 Reduction by Nanoscale Galvanic Couples..............................................183
Kanchan Mondal

Reduction of Carbon Dioxide to Formate in an Electrochemical Membrane Reactor in KHCO3 Buffer Solutions .................................................................187
Kandasamy Subramanian, Govindarajan Gomathi, and Krishnasamy Asokan

Author Index.....................................................................................................199

Subject Index ....................................................................................................201
