Light Metals

Aluminum Alloys, Processing and Characterization

This Aluminum Alloys, Processing and Characterization Symposium, along with Cast Shop Technology, Aluminum Reduction Technology, Electrode Technology for Aluminum Production, and Alumina and Bauxite, form the Light Metals Symposium at the TMS 2020 Annual Meeting & Exhibition. This meeting is an excellent opportunity to interact with experts from the Light Metals industry and academia from all over the world and get the latest updates on key issues in the industry.

The symposium covers all aspects of the physical and mechanical metallurgy of aluminum alloys, as well as processing methods (continuous casting is covered by Cast Shop Technology), product development, testing, and implementation of aluminum for end applications, including transportation (automotive, aerospace, and marine), packaging, and other key product segments.

You are invited to submit papers of fundamental and applied research in the following subject areas:

- Alloy Development, including Al-Sc alloys
- Microstructure Evolution and Characterization
- Defect Detection and Control
- Surface Modification and Control
- Mechanical Behavior
- Material and Process Modeling
- Processing Innovation
- Process Control and Measurements
- New Applications and Products

Authors seeking an oral presentation opportunity must submit a manuscript for the Light Metals 2020 proceedings or be approved for publication in a TMS journal. Authors seeking a poster presentation are not eligible to publish in the conference proceedings.

ORGANIZER
Dmitry Eskin, Brunel University, United Kingdom

SYMPOSIUM SPONSORS
TMS Light Metals Division
TMS Aluminum Committee
