SUBMIT AN ABSTRACT TO:

NUCLEAR MATERIALS

CERAMIC MATERIALS FOR NUCLEAR ENERGY RESEARCH AND APPLICATIONS

Nuclear energy is an essential element of a clean energy strategy, avoiding greenhouse gas emissions of over two billion tons per year. Ceramic materials play a critical role in nuclear energy research and applications. Nuclear fuels, such as uranium dioxide (UO₂) and mixed oxide (MOX) fuels, have been widely used in current light water reactors (LWRs) to produce about 15% of the electricity in the world. Silicon carbide (SiC) is a promising accident-tolerant cladding material and is under active research studies. Some oxide ceramics have been proposed for novel inert matrix fuels or have been extensively studied as waste forms for the immobilization of nuclear waste. Moreover, ceramics are under active studies for fusion reactor research. This symposium focuses on experimental and computational studies of ceramics for nuclear energy research and applications. Both practical reactor materials and surrogate materials are of interest.

The topics of interest include but are not limited to:

- defect production and evolution
- mobility, dissolution, and precipitation of solid, volatile, and gaseous fission products
- changes in various properties (e.g., thermal conductivity, volume swelling, mechanical properties) induced by microstructural evolution; and radiation-induced phase changes

Experimental studies using various advanced characterization techniques for characterizing radiation effects in ceramics are of particular interest. The irradiation techniques such as laboratory ion beam accelerators, research and test reactors, as well as commercial nuclear power reactors are all of interest. Computational studies across different scales from atomistic to the continuum are all welcome. Contributions focused on novel fuels such as doped UO₂, high density uranium fuels like uranium nitrides and silicides, and coatings for accident-tolerant fuel claddings are also encouraged. This symposium is intended to bring together national laboratory, university, and nuclear industry researchers from around the world to discuss the current understanding of the radiation response of ceramics through experiment, theory and multi-scale modeling.

ORGANIZERS

Xian-Ming Bai, Virginia Polytechnic Institute and State University, USA
Yongfeng Zhang, University of Wisconsin-Madison, USA
Larry Aagesen, Idaho National Laboratory, USA
Vincenzo Rondinella, Jrc-Ec, Germany

SYMPOSIUM SPONSORS

TMS Extraction & Processing Division
TMS Light Metals Division
TMS Structural Materials Division
TMS Advanced Characterization, Testing, and Simulation Committee
TMS Energy Committee
TMS Nuclear Materials Committee

Abstract Deadline is July 1, 2020. Submit online at
www.programmaster.org/TMS2021.
