ELECTRONIC, MAGNETIC, AND ENERGY MATERIALS

Phase Stability, Phase Transformations, and Reactive Phase Formation in Electronic Materials XXIII

This is the 23rd in a series of TMS symposia addressing the stability, transformation, and formation of phases during the fabrication, processing, and utilization of electronic materials and devices.

Topics of interests range from microelectronic technologies to advanced energy technologies, including phase stability, transformation, formation, and morphological evolution of electronic packaging materials, interconnection materials, integrated circuit materials, optoelectronic materials as well as energy storage and generating materials.

ORGANIZERS
Yu-Chen Liu, National Cheng Kung University, Taiwan
Hiroshi Nishikawa, Osaka University, Japan
Shih-kang Lin, National Cheng Kung University, Taiwan
Chao-hong Wang, National Chung Chung University, Taiwan
Chih-Ming Chen, National Chung Hsing University, Taiwan
Jaeho Lee, Hongik University, Korea, South
Zhi-Quan Liu, Shenzhen Institutes of Advanced Technology, China
Ming-Tzer Lin, National Chung Hsing University, Taiwan
Yee-wen Yen, National Taiwan University of Science and Technology, Taiwan
A.S.Md Abdul Haseeb, Bangladesh University of Engineering and Technology, Bangladesh
Ligang Zhang, Central South University, China
Sehoon Yoo, KITECH, Korea, South
Ping-Chuan Wang, SUNY New Paltz, USA
Yu-An Shen, Feng Chia University, Taiwan

SYMPOSIUM SPONSORS
TMS Functional Materials Division
TMS Alloy Phases Committee
