LIGHT METALS

Aluminum Alloys: Development and Manufacturing Supplier Forum

The Development and Manufacturing Supplier Forum, launched in 2025, provides an opportunity for equipment suppliers to showcase their current technologies and innovations related to aluminum alloys, development, and manufacturing. The forum will cover all aspects of equipment used in the physical and mechanical metallurgy of aluminum alloys, including analytical tools for product development, testing, and characterization for end-use applications. Topics will include equipment for industries such as transportation (automotive, aerospace, and marine), packaging, and other key product segments.

This call for presentations is directed at suppliers of production and analytical equipment, as well as managers, supervisors, technical personnel, and others involved in aluminum alloy development and manufacturing. While published manuscripts will not be required, presentations will be available to be shared.
